Capstone Paper ADR

Offline fallback - three questions, 20 ADR marks

Use when a device, package, power, or connectivity failure prevents execution. Write short answers or pseudo-code. No code execution is required.

Learner: _____ Date: _____ Case: _____

1. Contract and architecture - 6 marks

What risk does the Development-to-Security boundary address? Name the DevDeliverable fields and sketch how the Coordinator validates the handoff before Security starts.

Scoring: concrete risk (2); correct fields and validation rule (2); explanation of the Development, Coordinator, and Security boundaries (2).

2. Governance and evidence - 7 marks

Which tools may the Manager, Coder, QA, Pen Tester, and Security Manager use? What test or audit evidence would show the boundaries held? Label evidence as observed or proposed.

Scoring: Development role/tool separation (2); scan and approval separation (2); contract rejection and ordered audit evidence (2); observed/proposed distinction (1).

3. Production next step - 7 marks

What is the largest remaining risk, what concrete control would you add before production, and how would you check that the control works?

Scoring: specific remaining risk (2); control and credible rationale (3); practical verification or acceptance check (2).

Q1 ____ / 6 **Q2 ____ / 7** **Q3 ____ / 7** **Total ____ / 20**

Assessor: _____ Feedback / accommodation record: _____

Award partial credit within each allocation. Sound reasoning satisfies the accepted Capstone fallback pass condition. Record these marks in ADR & defense /20. This sheet awards ADR marks only and does not create code execution evidence or code marks.

If code could not be assessed, leave its mark blank and record the reason or an explicitly agreed accommodation. The course tracker leaves the total blank while a required component is missing.
